

Baby Food Jar Snow Globes -

Adults need to supervise cutting in this craft

You will need:

- Any size baby food jar, cleaned with label removed
- Mineral oil - enough to fill jar
- Sprinkles (use glitter, crushed egg shells, or recycled pellets made from plastic milk containers)
- A plastic milk container, any size
- Water resistant glue or melted wax
- Scissors
- Food coloring (optional)

Directions:

- Cut snowman shapes out of the milk container and glue together to form a snowman. Make sure the bottom piece has a little tail that can be bent.
- Bend the tail and glue or use melted wax to adhere the snowman to the underside of the jar lid and let dry
- Crush small pieces of egg shell or cut pieces of milk container for snow and add glitter for a sparkly effect
- Add a teaspoon of the snow mixture to the jar, and fill the jar to the brim with mineral oil
- Put glue or a bit of melted wax on the outside rim and screw on the lid so that it is sealed shut and the snowman is inside the globe. Be prepared for a small overflow of mineral oil as you place the lid on top of the jar. Overfilling the jar reduces or eliminates air bubbles in the snowglobe
- Wait a few minutes to be sure the glue or wax is dry and turn upside down for snow flurry effect
